Answer:

```
def remove(self, index):
    n = None
    if (index == 0):
        n = self.head
        self.head = self.head.next
    else:
        pre
        tail = self.head
        for i in range(index-1):
            tail = tail.next
        pre = tail
        rem = pre.next
        pre.next = rem.next
    rem.val = None
    rem.next = None
    return self.head
```
